I'm a technical support engineer with a full-stack background and fourteen years of support, debugging, and remediation experience. Skilled at tracing issues through rendered behavior and code, I resolve problems at the root. With an eye towards compassion for the user I'm a clear communicator who enjoys making technical details understandable. As a strong self-directed learner, I tackle new platforms, frameworks, and tools with passion.

EXPERIENCE

AudioEye — Implementation Developer April 2022 – June 2026

- Closed 6,000+ bugs across 370+ client sites (1,793 pages) with targeted JavaScript/TypeScript fixes written against unfamiliar third-party codebases.
- Turned vague or misidentified bug reports from technical and non-technical users into reproducible issues and working fixes by clarifying details with the reporter.
- Diagnosed front-end bugs across live production websites using Chrome DevTools (Elements, Console, Sources, Application) to trace issues to root cause.
- Identified common issues in shared client templates that cascaded across multiple production sites.
- Applied W3C and WCAG standards throughout, and authored source-feedback reports for issues with no viable in-tool fix.
- Collaborated with teammates to identify and report bugs in internal platforms and tooling.

Current Designs — Support Engineer January 2010 – March 2020

- Served as the direct link from the company to all users.
- De facto in-house expert on all Current Designs hardware and software.
- Provided direct technical support to all users worldwide via troubleshooting, firmware and software updates, and repairs.
- Tracked hardware and firmware bugs through to resolution.
- Managed quality control across all stock and customer orders.
- Communicated users' needs to both production and development teams.
- Meticulous documentation of all individual support issues and recurring technical issues.

EDUCATION

General Assembly — Software Engineering Immersive 2021
Certificate of Completion, Software Engineering
Savannah College of Art and Design 1998 – 2002
BA, Sequential Art — Savannah, GA

SKILLS

Frameworks & Libraries: React, Node.js/Express, jQuery
Data: SQL (SQLite, PostgreSQL)
Tools & Practices: Git, GitHub, Jira, Chrome DevTools, Postman, Claude Code (AI-assisted development)
Core Competencies: written and verbal communication, user interactions, information gathering, meticulous detailed documentation
